Digital Experience Platform

NEXTORE

NEXTORE is an all-encompassing AI-powered solution designed for enterprises to streamline their business processes, reducing the time and effort spent on content searching and filing. It also serves as a knowledge-sharing platform.

NEXTORE leverages machine learning and large language models throughout the business process to create a well-structured, easily accessible knowledge repository.

It offers a user-friendly, centralized platform that simplifies the process of searching, accessing, managing, and finding information quickly.

Three Highlights

01 Business Process Management and Automation

A.I.-Based OCR and ICR Engine

Convert your scanned documents and images into searchable text for easy retrieval.

e-Forms

Create e-forms using the online builder through a drag-and-drop interface.

Workflow

Streamline and enhance collaboration with our online builder, enabling you to create document workflows and implement a task-based working environment with case management capabilities.

02 Connection and Collaboration

Digital Signing

Authorize signatures with e-certificates to ensure trust and enhanced security.

Enterprise Instant Messaging

Enhance security and efficiency with on-premises instant messaging. Protect corporate data while respecting employee privacy. Real-time messaging, collaboration features boost productivity.

A.I.-Based Chatbot

Provide customizable chatbots that use rules and artificial intelligence to simulate real conversations.

03 Content and Knowledge

Harnessing LLMs¹ (Large Language Models) Power with Complete Confidentiality

Access relevant information effortlessly, through an intuitive and secure platform. Streamline your organization's operations with A.I.-driven efficiency, saving valuable time and resources.

On-Premises Private GPT

Intelligent Document Processing

Deploy an A.I. assistant that comprehends your company's unique context and terminology. With Private GPT, you can leverage specialized language models like GPT-4 Turbo to directly analyze your internal documents. This framework seamlessly adapts to a wide range of content, including policy manuals, technical specifications, and project reports.

Personalized Content Generation

Private GPT can generate personalized content for marketing campaigns, social media posts, and customer communications based on user preferences and behaviour. This enables businesses to deliver tailored messages that resonate with their target audience.

Knowledge Management

Facilitate effective knowledge management by providing a platform for natural language conversations with company documents. Valuable knowledge and insights are easily accessible and can be shared across the organization.

Robust Security and Privacy

Operate solely within your organization's environment, ensuring a strong framework of privacy. Sensitive information remains confidential and well-protected, guaranteeing utmost data security.

Efficiency Unleashed with Priavte GPT

1

Uploading Corporate Documents

It offers employees a platform to engage in natural language conversations with their company documents. Instead of having to manually search through folders or relying solely on keyword searches, employees can simply upload the document they need answers from.

2

Effortless Document Navigation and Queries

By asking questions just as they would on a search engine like “what’s our annual leave policy?” or “how do I claim the expense?”, the private LLM-powered chatbot processes these queries using advanced large language models to understand context and intent.

Immediate, Accurate Responses

After scanning the uploaded documents, the system extracts relevant information, and provides concise answers right away, eliminating the enquiry process from minutes to seconds.

3

Beneficial Outcomes

Efficiency

Employees streamline their workflow by bypassing time-consuming searches, accessing prompt answers that accelerate decision-making processes, ultimately boosting work efficiency and productivity within the organization.

Security

Operate within your organization's environment, ensuring the privacy and security of sensitive information. Confidential company documents remain protected and confidential.

NEXTORE System Requirement

GPU	96GB VRAM
CPU	48 Core at 2.4 GHz
RAM	256GB
Storage	1TB for Operating System
Data Storage	Up to client requirement

The **BEST** of On-Premises & Cloud Computing

An intuitive cloud operating experience

Optimized performance for large, complex AI workloads

» Drive your journey towards **AI** at scale

Boost AI Efficiency Instantly

Improve efficiency by accelerating value delivery and providing developers with self-serve access to essential AI tools to boost productivity.

Centralize Access to Your Entire Data Repository

Facilitate access to enterprise-wide data by integrating a unified system to enhance data accessibility throughout the organization.

Instill Enterprise-Grade Confidence and Control

Utilize a private cloud environment for managing, securing, and governing your data, models, and infrastructure.

Ensure Data Privacy with a Cloud Experience

On-premises deployment tailored for hybrid environments. Flexible and modular, leveraging cloud technologies for enhanced economics and scalability.

Case Study

All-in-One Electronic Platform

e-Forms

OCR and ICR Engine

Case Management

Workflow

To support the Hong Kong Smart City Blueprint, Nexify has developed a comprehensive digital platform for our client, enabling them to receive and process forms and applications related to regulatory submissions. This user-friendly e-service system allows applicants to upload documents, track application progress, and enhance transparency in the approval process. With this digital platform, applicants can conveniently submit their information anytime, anywhere, streamlining the overall application process.

Mobile Site Inspection Apps

Instant Messaging

Workflow

To enhance the organizer's mobile app development, Nexify offers a range of secured technologies with instant messaging features. The IM solution includes a Mobile Content Store for seamless document retrieval. Experience the convenience of an Electronic Inspection Form equipped with photo/video capturing, location tracking, and voice input capabilities. Additionally, empower your organization with robust case management capabilities for efficient case tracking and management.

Enterprise Content Repository

Workflow

Knowledge Management

Digital Signing

To enhance knowledge management and streamline workflows, Nexify has developed the Knowledge Management Portal. This advanced platform integrates cutting-edge search technologies and seamlessly connects multiple content repositories. It offers a secure knowledge store with an approval workflow, allowing authorized access to validated information. The KM Portal also incorporates case management workflows, bookmarks management, annotations, and features for signing and sealing documents, including efficient chop management. Experience a comprehensive solution that revolutionizes knowledge management and empowers professionals to excel in their work.

Automatic Test Report Submission and Checking System

OCR and ICR Engine

Workflow

To enhance the quality assurance of public housing and support the digitization of the construction industry, Nexify has developed an automatic checking system for construction material test reports. The platform allows users to import and classify construction material test reports. It also checks the completeness of these reports, and relevant content is automatically extracted for further analysis and compliance checks. Incomplete reports are flagged for manual review, reducing stress and improving accuracy. Streamlining the process saves time and resources, enabling focused resolution of identified issues.

Transforming Your Business with AI

With NEXTORE, document management becomes systematic and efficient.

Simplify and Expedite Document Retrieval

Enable one-click document scanning and optical character recognition (OCR) for simplified and expedited document retrieval in the future.

Enhance Efficiency and Discoverability

Improve efficient content organization, enhanced navigation, improve discoverability and contextual understanding.

Enhance User File Access Security

Enable advanced configuration of user file access permissions to ensure the security of critical data and prevent unauthorized data leaks.

User-Friendly Interface

Offer a clear and intuitive interface that enables users to navigate and master system operations quickly.

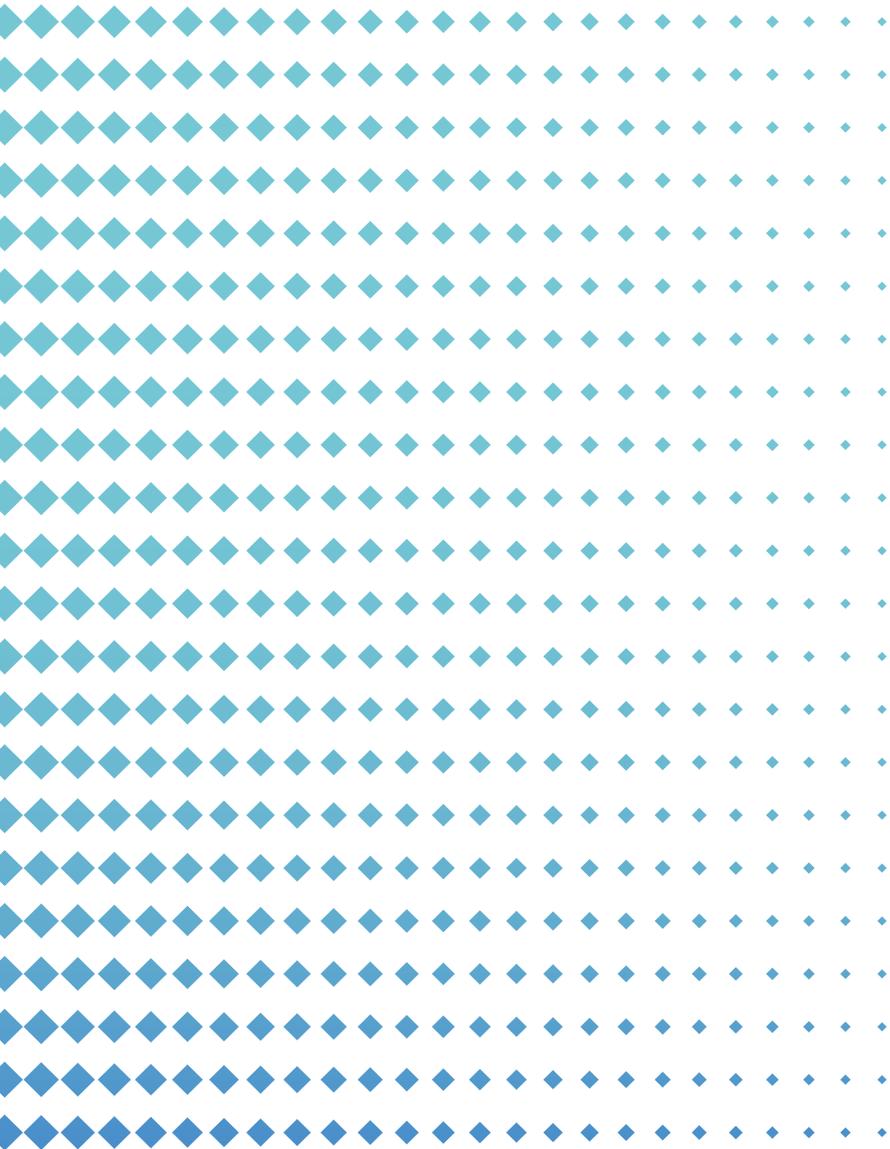

Increase Productivity

Provide a comprehensive document management system that facilitates internal communication processes and improve overall operational efficiency.

Save Time and Cost

Leverage the power of Private GPT to boost internal document management efficiency, save administrative time, and free up valuable storage space.
